

Functional & Performance Testing Template

Model Performance Test

Date	03 October 2026
Team ID	SWTID-2026-6763
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	10 Marks

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Incident Creation Validation	1. Enter valid details and submit the incident. 2. Repeat with the mandatory fields left empty.	Valid incidents are created and validation is shown for missing mandatory fields.	Valid incident was created; validation was shown for missing mandatory fields.	PASS
FT-02	Mandatory Fields on Resolution (UI Policy)	1. Set State to Resolved with Close code and Close notes empty. 2. Try to save.	Close code and Close notes are mandatory and the incident is not saved until they are filled.	Fields became mandatory and the incident was not saved until they were filled.	PASS
FT-03	Read-only and Visibility Control (UI Policy)	1. Open a closed incident. 2. Change the State/condition that controls field visibility.	Fields are read-only on closed incidents and show or hide according to their conditions.	Fields were read-only on the closed incident and showed or hid correctly.	PASS
FT-04	Client Script Messages (onLoad / onChange)	1. Open the incident form. 2. Change Priority to 1 - Critical.	The guidance message appears on load and the Priority message appears on change.	Both messages were displayed as expected.	PASS
FT-05	onSubmit Validation and No-match Handling	1. Submit an incident with Short description empty. 2. Save an incident that matches no condition.	Empty Short description blocks submission, and unmatched incidents save normally without errors.	Submission was blocked with an error; the unmatched incident saved normally.	PASS
PT-01	Form Response Time Test	1. Change State and Priority on the form. 2. Observe how quickly fields and messages respond.	Fields and messages respond instantly, within the defined performance target.	Fields and messages responded instantly.	PASS
PT-02	Multiple Incident Test	1. Open and save several incidents with different states and priorities. 2. Observe the form behaviour for each.	All incidents behave correctly without errors or incorrect field control.	All incidents behaved correctly without errors.	PASS
PT-03	Form Reliability Test	1. Repeat the same action several times on different incidents. 2. Monitor the behaviour.	The UI Policies and Client Scripts behave consistently every time.	Behaviour was consistent every time.	PASS

Testing Summary

Testing Type	Test Cases	Passed	Failed
Functional Testing	5	5	0

Performance Testing	3	3	0
Total	8	8	0

Overall Result

Total Test Cases: 8

Passed: 8

Failed: 0

Overall Pass Rate: 100%

Conclusion

All 8 functional and performance test cases passed with no failures. The UI Policies and Client Scripts on the Incident form made the resolution fields mandatory, controlled read-only and visible fields, displayed the configured messages, blocked empty submissions, and responded instantly and consistently during testing.
