

User Acceptance Testing (UAT)

Date	03 October 2026
Team ID	SWTID-2026-6763
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	10 Marks

Project Overview:

Project Name: Implement Client Script & UI Policy (Incident)

Project Description: The project implements UI Policies and Client Scripts on the ServiceNow Incident form. Based on the configured conditions, the form makes fields mandatory, visible or read-only, displays guidance messages and validates the entries before the incident is saved.

Project Version: Version 1.0

Testing Period: 03 October 2026 to 03 October 2026

Testing Scope:

Features and functionalities tested:

- Incident creation and field validation
- UI Policy: mandatory fields on resolution
- UI Policy: read-only fields on closed incidents
- UI Policy: field visibility based on conditions
- Client Script: onLoad guidance message
- Client Script: onChange reaction on Priority
- Client Script: onSubmit validation
- Form behaviour when no condition matches

User stories / requirements tested:

- Create an incident with the required information.
- Make Close code and Close notes mandatory when an incident is resolved.
- Make fields read-only once an incident is closed.
- Show or hide fields based on conditions.
- Display messages and validate the form using client scripts.
- Keep the form usable when no condition matches.

Testing Environment:

Application: ServiceNow Developer Instance

Module: Incident form / UI Policies / Client Scripts

Environment: ServiceNow Development Environment

URL/Location: ServiceNow Developer Instance

Credentials (if required): Authorized project team account

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Incident Creation	1. Open the new Incident form. 2. Enter caller and short description. 3. Submit the incident.	Incident is created successfully with the entered information.	Incident was created successfully with the entered information.	PASS
TC-002	Mandatory Fields on Resolution (UI Policy)	1. Open an incident and set State to Resolved. 2. Leave Close code and Close notes empty. 3. Try to save.	Close code and Close notes are shown as mandatory and the incident cannot be saved until they are filled.	Both fields were mandatory; the incident could not be saved until filled.	PASS

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-003	Read-only Fields on Closed Incident (UI Policy)	1. Open an incident with State = Closed. 2. Try to edit the controlled fields.	The controlled fields are read-only on the closed incident.	Controlled fields were read-only.	PASS
TC-004	Field Visibility (UI Policy)	1. Open an incident. 2. Change the State/condition that controls the field. 3. Observe the field.	The field appears when its condition is true and hides when it is not.	Field appeared and hid according to the condition.	PASS
TC-005	onLoad Client Script	1. Open any incident form. 2. Observe the top of the form.	The guidance message is displayed when the form loads.	The guidance message was displayed on load.	PASS
TC-006	onChange Client Script (Priority)	1. Open an incident. 2. Change Priority to 1 - Critical.	The configured message is displayed when Priority is set to 1 - Critical.	The message was displayed on change.	PASS
TC-007	onSubmit Validation	1. Open a new incident. 2. Leave Short description empty. 3. Click Submit.	Submission is blocked and an error message is shown for the empty Short description.	Submission was blocked with an error message.	PASS
TC-008	No Matching Condition	1. Open an incident that matches no UI Policy condition (e.g. State = New, Priority = 4). 2. Edit and save the incident.	The form behaves normally, with no errors or conflicts between policies and scripts.	The form behaved normally with no errors.	PASS

UAT Result Summary:

Total Test Cases	Passed	Failed	Pass Rate
8	8	0	100%

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	No defects identified during UAT.	Not applicable.	—	Closed / No Bug	All tested functionalities worked as expected.
BG-002	—	—	—	—	—

Notes:

- The test cases cover both positive and negative scenarios (for example TC-007 and TC-008).
- Different incident states and priorities were used to verify the UI Policy conditions.
- UI Policy and Client Script behaviour was verified on the Incident form.
- All 8 UAT test cases passed; no defects were identified.
