

Project Design Phase Solution Architecture

Date	03 October 2026
Team ID	SWTID-2026-6763
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Solution Architecture:

1. Technology Stack

- **Core Platform:** ServiceNow Instance
- **Key Modules:** Incident Management, Client Scripts and UI Policies.
- **Interface:** ServiceNow Incident Form.

2. Structure & Behavior

- **Trigger:** A user creates or updates an Incident record.
- **Data Flow:**
 - The system captures Incident form field values.
 - **UI Policies** evaluate specified conditions and dynamically control field visibility, mandatory status, and read-only behavior.
 - **Client Scripts** perform client-side validation and execute actions based on user interactions.
 - The Incident form is updated dynamically according to the configured rules.

3. Features & Development Phases

- **Phase 1 (Setup):** Identify Incident fields and define the required conditions and form behaviors.
- **Phase 2 (Configuration):** Create Client Scripts and UI Policies with appropriate conditions and actions.
- **Phase 3 (Testing & Deployment):** Test different Incident scenarios and verify field behavior before applying the configuration.

4. Specifications

- **Inputs:** Incident form fields such as Category, Subcategory, Impact, Urgency and Description.
- **Processing:** Client-side validation and condition-based field control.
- **Outputs:** Dynamically controlled Incident fields with improved data accuracy and a user-friendly form.
