

Planning Logic

A **Sprint** is a fixed period during which the team works on a specific set of tasks for the project.

An **Epic** is a large project activity that is divided into smaller **User Stories** that can be completed during one or more sprints.

A **User Story (USN)** is a small, specific task that contributes to completing an Epic.

A **Story Point** represents the amount of effort required to complete a User Story. The Fibonacci-based values **1, 2, 3, and 5** are used to estimate the effort.

- **1** – Very Easy task
- **2** – Easy/Normal task
- **3** – Moderate task
- **5** – Difficult task

Sprint 1

ServiceNow Setup (Epic 1)

- **Understanding Project Requirements (USN1) – 2**
- **Creating and Configuring the ServiceNow Developer Instance (USN2) – 2**

Incident Form Configuration (Epic 2)

- **Identifying Incident Fields and Conditions (USN3) – 3**
- **Creating Sample Incidents for Testing (USN4) – 3**

UI Policy Configuration (Epic 3)

- **Creating UI Policies for Mandatory Fields (USN5) – 3**
- **Configuring UI Policy Actions for Visibility and Read-only Control (USN6) – 5**

Total Story Points in Sprint 1 = 2 + 2 + 3 + 3 + 3 + 5 = 18

Sprint 2

Client Script Configuration (Epic 4)

- **Creating onLoad Client Script (USN7) – 2**
- **Creating onChange Client Script (USN8) – 3**
- **Creating onSubmit Validation Script (USN9) – 5**

Testing & Validation (Epic 5)

- **Testing Different Incident Scenarios (USN10) – 3**
- **Handling Conflicts and Unmatched Conditions (USN11) – 2**

Documentation & Demonstration (Epic 6)

- **Preparing Documentation and Final Demonstration (USN12) – 3**

Total Story Points in Sprint 2 = 2 + 3 + 5 + 3 + 2 + 3 = 18

Total Story Points

Sprint	Story Points
Sprint 1	18
Sprint 2	18
Total	36

Velocity Calculation

Velocity = Total Story Points Completed / Number of Sprints

Total Story Points = 18 + 18 = 36

Number of Sprints = 2

Velocity = 36 / 2 = 18

Team Velocity = 18 Story Points per Sprint

This planning is directly aligned with the project “Implement Client Script & UI Policy (Incident)”, covering the work from ServiceNow setup → incident form configuration → UI policies → client scripts → testing → documentation and demonstration.
