

Acceptance Testing

UAT Execution & Report Submission

Date 03 October 2026

Team ID SWTID-2026-6763

Project Name Implement Client Script & UI Policy (Incident)

Maximum Marks 4 Marks

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage, validation activities, and open issues of the Implement Client Script & UI Policy (Incident) project at the time of release to User Acceptance Testing (UAT). The testing focuses on verifying that the Incident form responds correctly to user actions and that the configured UI Policies and Client Scripts produce the expected field behavior without affecting normal incident creation and updating.

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved during the testing phase. The analysis covers issues related to field visibility, mandatory and read-only behavior, client-side validation, automatic field changes, and the interaction between Client Scripts and UI Policies. Defects are categorized according to the resolution applied during testing.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	0	0	1	0	1
Duplicate	0	0	1	0	1
External	0	1	0	0	1
Fixed	1	2	4	2	9
Not Reproduced	0	0	1	0	1
Skipped	0	0	0	0	0
Won't Fix	0	0	1	0	1
Totals	1	3	8	2	14

3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and remained untested across the major areas of the Incident form configuration. Testing includes the initial form state, UI Policy conditions, Client Script execution, field validation, interaction between multiple configurations, and the final usability of the Incident form.

Section	Total Cases	Not Tested	Fail	Pass
Incident Form – Initial State	5	0	0	5
UI Policy – Mandatory Fields	6	0	0	6
UI Policy – Read-only / Visibility	6	0	0	6
Client Script – onChange Behavior	7	0	0	7
Client Script – Validation & Messages	5	0	0	5
Policy and Script Interaction	5	0	0	5
Incident Creation / Update	5	0	0	5
Final Report Output	3	0	0	3

4. UAT Summary

The UAT verifies that the configured Incident form behavior works as intended under the defined conditions. The test coverage checks that fields respond appropriately when relevant values are selected or changed, that mandatory and read-only states are applied correctly, and that client-side validation supports accurate Incident data entry. The final objective is to confirm that the configuration improves form control while preserving normal Incident management activities.
