

Client Script & UI Policy (Incident) in ServiceNow

SCENARIO

A service desk agent opens an incident in ServiceNow, where UI Policies and Client Scripts guide data entry, enforce mandatory fields and validate the form before the incident is saved or resolved.

	1. Open Form	2. Enter Details	3. Change Fields	4. UI Policy Applies	5. Script Validates	6. Save / Resolve	7. Review & Closure
Steps What does the person typically experience?	Open ServiceNow and create a new incident	Enter caller and issue details	Update State, Priority or Category	UI Policy shows, hides or locks fields	Client Script validates the entries	Submit or resolve the incident	Incident resolved and closed
Interactions What interactions do they have at each step along the way?	ServiceNow Web UI	Incident form	State and Priority fields	UI Policy Actions	Client Script (g_form)	Incident record	Close code and close notes
Goals & motivations At each step, what is a person's primary goal or motivation?	"Help me start an incident easily."	"Help me enter the right details."	"Show me what I need to fill in."	"Show only the fields that matter."	"Warn me before I make a mistake."	"Save my incident without errors."	"Let me close it with complete information."
Positive moments What steps does a typical person find enjoyable, productive, or delightful?	Easy incident creation	Clear form messages	Form reacts instantly	Fields adjust automatically	Errors caught early	Clean, valid data saved	Complete close notes
Negative moments What steps does a typical person find frustrating, confusing, or time-consuming?		Missing/incomplete details		Condition may not match	Validation message may be unclear	Repeated error messages	Delayed closure if notes are missing
Areas of opportunity How might we make each step better?	Improve form layout	Add clear field guidance	Highlight required fields	Refine UI Policy conditions	Improve script messages	Test all scenarios	Extend rules to other forms
