

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	03 October 2026
Team ID	SWTID-2026-6763
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Creation	Create a new incident Enter caller and issue details Submit incident with required details
FR-2	Incident Form Configuration	Identify incident form fields to control Define conditions (State, Priority, Category) Plan client-side behaviour for each field
FR-3	UI Policy Configuration	Create UI Policies on the Incident table Define UI Policy conditions Configure UI Policy Actions (mandatory, visible, read-only)
FR-4	Client Script Configuration	Create onLoad, onChange and onSubmit client scripts Display form messages using g_form Validate field values before submission
FR-5	Mandatory Field Enforcement	Make Close code and Close notes mandatory on resolution Block submission when required details are missing Display clear messages to the user
FR-6	Field Visibility & Read-only Control	Show or hide fields based on conditions Make fields read-only once incident is closed Reverse the action when the condition is no longer true
FR-7	Exception Handling	Handle missing or invalid field values Avoid conflicts between UI Policy and Client Script Keep the form usable when no condition matches

FR-8	Testing & Validation	Test different incident states and priorities Verify UI Policy behaviour Verify Client Script behaviour
------	----------------------	---

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The incident form should guide users with clear messages and show only the fields that are relevant at each step.
NFR-2	Security	UI Policies and Client Scripts run in the browser, so access to create, view and modify incidents must remain controlled by ServiceNow roles and ACLs.
NFR-3	Reliability	UI Policies and Client Scripts should behave consistently for the same conditions without errors or conflicts.
NFR-4	Performance	Field changes, messages and validations should respond instantly in the browser without noticeable delay on the incident form.
NFR-5	Availability	The form behaviour should be available whenever the ServiceNow instance is available, without extra setup for each user.
NFR-6	Scalability	The same UI Policy and Client Script approach should be extendable to more fields, conditions and tables when required.
