

Project Design Phase-II Technology Stack (Architecture & Stack)

Date	03 October 2026
Team ID	SWTID-2026-6763
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Technical Architecture:

The deliverable shall include an **architectural diagram of the proposed Client Script and UI Policy solution for the Incident form in ServiceNow**, along with the functional and non-functional requirements specified in **Table 1 and Table 2**.

Example: Incident Form Validation using UI Policy & Client Script

Incident Form Validation Workflow using UI Policy & Client Script

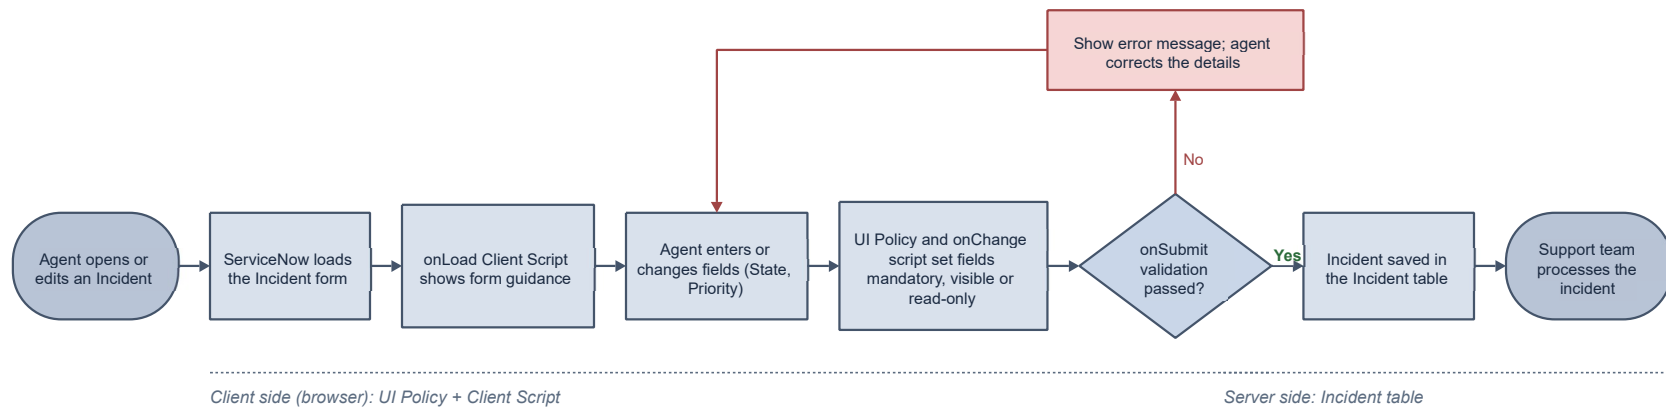

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	How the user interacts with the application, i.e. the Incident form in the ServiceNow web UI	ServiceNow Platform UI (HTML, CSS, JavaScript rendered by ServiceNow)
2.	Application Logic-1	Client-side logic that runs when the form loads, a field changes or the form is submitted	Client Scripts (onLoad, onChange, onSubmit) - JavaScript with the g_form API
3.	Application Logic-2	Declarative rules that make fields mandatory, visible or read-only based on conditions	UI Policy and UI Policy Actions
4.	Application Logic-3	Messages shown to the user on the form (information, warning and error messages)	g_form.addInfoMessage() / addErrorMessage()
5.	Database	Incident records and their field values, choice lists and configuration	ServiceNow tables (Incident - incident)
6.	Cloud Database	Database service on the cloud	ServiceNow instance database (cloud hosted)
7.	File Storage	Attachments on incidents and movement of configuration between instances	ServiceNow attachments (sys_attachment), Update Sets
8.	External API-1	Not required - all logic is configured inside the ServiceNow instance	None
9.	External API-2	Not required	None
10.	Machine Learning Model	Not required for this project	None
11.	Infrastructure (Server / Cloud)	Application deployment on cloud. Local Server Configuration: Not applicable Cloud Server Configuration: ServiceNow-managed instance	ServiceNow Personal Developer Instance (PDI) on ServiceNow cloud

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Frameworks used for the solution	ServiceNow platform with client-side JavaScript; no external open-source framework is required
2.	Security Implementations	Access and security controls: users can only view or change incidents allowed by their roles; client-side checks are backed by server-side controls	ServiceNow roles, ACLs, HTTPS (provided by the platform)
3.	Scalable Architecture	Multi-tier ServiceNow architecture; the same UI Policy and Client Script approach can be extended to other fields and tables	ServiceNow platform
4.	Availability	Form behaviour is available whenever the cloud-hosted ServiceNow instance is available	ServiceNow cloud instance
5.	Performance	Rules run in the browser, giving instant feedback without a server round trip; scripts are kept short and simple	UI Policy, Client Script
