

Ideation Phase

Brainstorm & Idea Prioritization

Date	01 October 2026
Team ID	SWTID-2026-6763
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization:

The Implement Client Script & UI Policy (Incident) project focuses on improving the Incident form through client-side validation and conditional user-interface behavior. The main ideas are to validate important entries with Client Scripts, automatically set or clear values where appropriate, and use UI Policies to make fields mandatory, visible, or read-only based on Incident conditions. The team can prioritize ideas that reduce incorrect data, are easy to test, and fit naturally into the existing form.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorming & Idea Template

Project Overview

The project focuses on improving the ServiceNow Incident form by combining Client Scripts for client-side validation/automation with UI Policies for conditional field behavior. The team identifies where users need

Team Gathering

- Bring the right users together
- Collect common Incident form issues
- Identify repeated data-entry errors

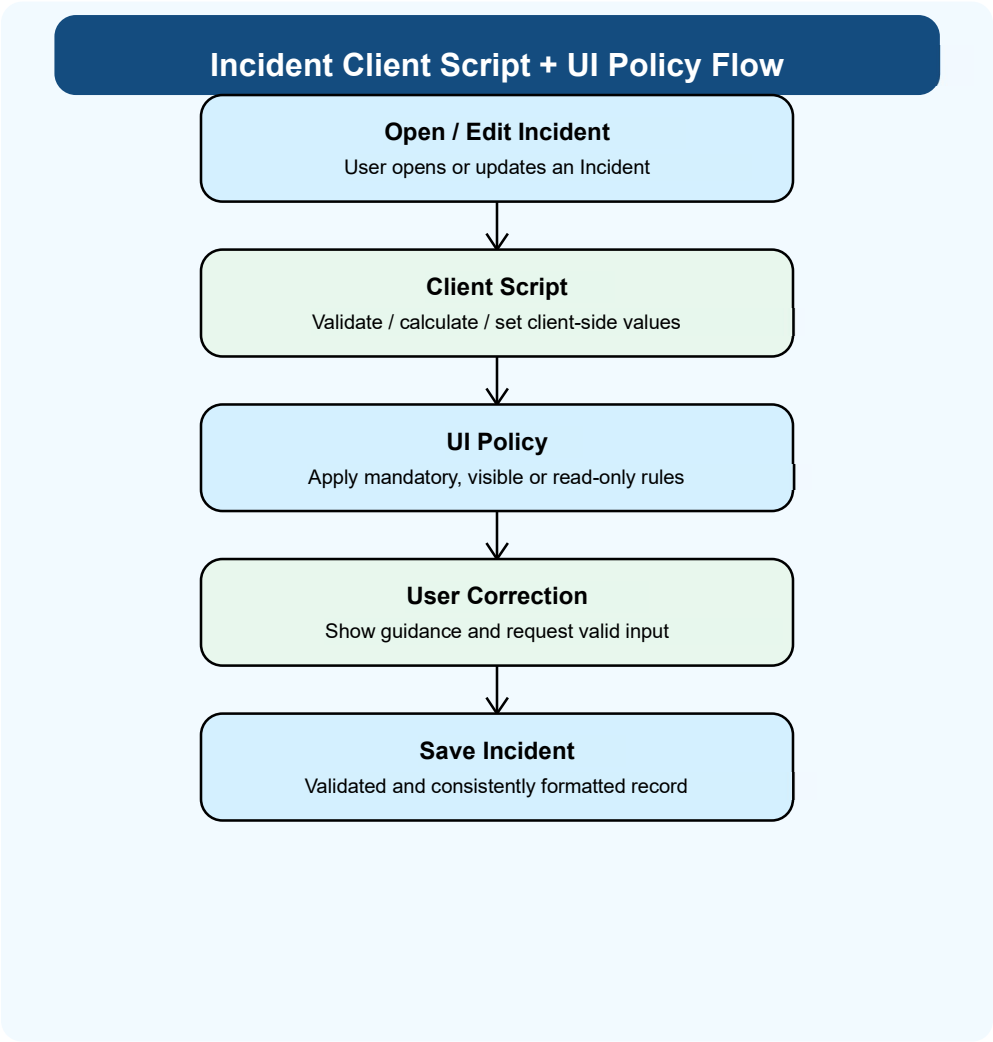

Collaboration & Problem Statement

- Discuss where Client Scripts help
- Define UI Policy conditions
- Keep the solution clear and testable

Final Output

- Validate required fields
- Control visibility/read-only behavior
- Reduce rework and improve consistency

Step-2: Brainstorm, Idea Listing and Grouping

Step-3: Idea Prioritization
